AgriShift® lighting systems “shift” spectrum and intensity, meeting the individual needs of your animals†.

Dim-to-Blue® technology encourages uniform growth by offering healthy bird development during every growth stage.

A Built For Your Barn® design uses techniques and materials that withstand harsh barn environments for years to come.

## Animal-Centric Lighting Systems

The AgriShift® MLM-B is an animal welfare-friendly lighting solution made to meet a birds’ developmental needs at every stage of growth. Designed with Dim-to-Blue® technology, it optimizes performance by providing a species-specific spectrum shown to naturally calm chickens, minimizing aggressive behaviors.

The AgriShift® MLM-B has an enhanced blue and green spectrum with added red content for early bird development. Green light

increases growth during early stages of development, while blue light is shown to be helpful in the growth of poultry at a later age by elevating plasma androgens. Other studies show that blue light keeps birds calm, reduces corticosterone levels and heterophil:lymphocyte ratios—blood markers for short- and long-term stress and positively affects blood glucose and triglyceride levels.
