POULTRY CHECK CART

Ruby360's poultry check cart is designed for egg layer barns. Check cart controls are made by Ruby360 and feature heavy duty electric fork lift solenoids capable of handling heavy amperage drawn by the 1hp 12vdc drive motor. Foot switch controls are available for each level as well as a manual push button to assist with walking the unit around the ends of rows. Long guide rollers follow the feed trough to easily guide the cart down the aisle. Our carts are built to last with a proven design and are custom made to order.

Features

- 1" square tubing design
- Motor/gearbox and battery mounted inside
- Removable top cover for maintenance/charging
- Removable mesh flooring
- Design is fully customizable
